Software Engineer — Backend, Full-Stack & Applied AI · Arlington, TX
+1 (682) 246-3736 · Email · LinkedIn · Portfolio · GitHub

Dear Hiring Manager,

I am a software engineer with 1.5 years of professional experience building backend and full-stack systems, and I am completing my M.S. in Computer Science at the University of Texas at Arlington in May 2027. I am applying for full-time Software Engineer, Backend, or AI/ML Engineer roles starting June 2027.

At Dev Information Technology in Jaipur, India, I built REST APIs and backend services in ASP.NET Core and C#, along with Angular front ends and SQL workflows, for two government platforms: Kaushal Darpan (Government of Rajasthan education) and NICSI (Government of India IT services). By rewriting slow MySQL queries and stored procedures and adding targeted indexes, I cut data-retrieval time by about 30%. I delivered student-records, fee-management, and workflow modules end to end and shipped them through Azure DevOps CI/CD in Agile/Scrum sprints.

At UTA I have focused on applied AI. I built and deployed an AI-powered RAG document assistant where users upload PDF or text files and ask questions answered from the most relevant passages, using Next.js, FastAPI, Hugging Face, and Pinecone, deployed on Vercel and Render. I also benchmarked classical and deep feature-matching methods (SIFT, ORB, SuperPoint, LightGlue) on 5,600+ KITTI driving frames, estimating camera pose with RANSAC.

I bring production experience, a solid grasp of backend systems and data, and real interest in building intelligent applications. I learn quickly, ask questions early, and take ownership from design through deployment.

Thank you for your time. I would welcome the chance to discuss how I can contribute to your team.

Sincerely,
Dev Patel
