Dear Hiring Manager,

I am a Computer Science graduate student at the University of Texas at Arlington and a software engineer with two years of professional experience building full-stack and backend systems. I am actively seeking internship and full-time opportunities across software engineering, backend development, and AI/ML engineering — and I am writing to express my strong interest in joining your team.

In my most recent role at Dev Information Technology, I designed and delivered enterprise-scale web applications using ASP.NET Core, Angular, Python, and SQL, built and consumed RESTful APIs, and led database performance improvements through query optimization and stored procedure design. I contributed to government-scale platforms for the Government of Rajasthan and NICSI (Government of India), where one of my SQL optimizations improved data retrieval speed by approximately 30%. I am comfortable working across the full stack, shipping production features, and collaborating in Agile/Scrum environments.

Beyond my core engineering work, I have built and deployed an AI-Powered RAG Document Assistant — a production application that allows users to upload PDF and text files and ask natural-language questions, with answers grounded in retrieved document context. The system uses Hugging Face APIs for language understanding, Pinecone for semantic vector search, FastAPI for backend services, and Next.js for the frontend, with a complete GitHub Actions CI/CD pipeline deployed on Vercel and Render. My academic work at UTA further supports this direction, with coursework in Artificial Intelligence, Computer Vision, Data Mining, and Big Data Analytics.

What I bring to any engineering team is a combination of practical shipping experience, a strong grasp of backend systems and data, and genuine curiosity about building intelligent applications. I learn quickly, ask questions early, and take ownership of work from design through deployment. Whether the role is backend-focused, full-stack, or AI-driven, I am ready to contribute from day one.

I would welcome the opportunity to discuss how my background fits your team's needs. Thank you for your time and consideration.

Sincerely,

Dev Patel
